

Learn@Home Project

Notes - Kick-off Meeting

Presentation of project

Learn@Home is an association that connects children who have difficulties at school with volunteer tutors online. Their aim is to enable any student, wherever he or she is, to have access to remote tutoring.

Each student registered on the site has a volunteer tutor assigned to them. The volunteer's goal is to support the student's learning through short weekly appointments. During these appointments, the volunteer helps the student with homework and organization.

To facilitate interaction and communication, Learn@Home wants to create a new website, which should consist of the following pages:

1. A login page
2. A dashboard page
3. A chat interface page
4. A calendar page
5. A task management page

Page-by-page Details

1. Login Page

The login page must allow a student or volunteer to log in. All other pages are only accessible once logged into an account. This page must include :

- A system for recovering forgotten passwords
- A link to an account creation page

Here is an outline of the customer's expectations in terms of interface:

Learn@Home Login Page

Email

Password

Log in

2. Dashboard

This page will serve as the main page and should therefore include a summary of all recent and important information from the other pages: chat, calendar, task management.

The page will display :

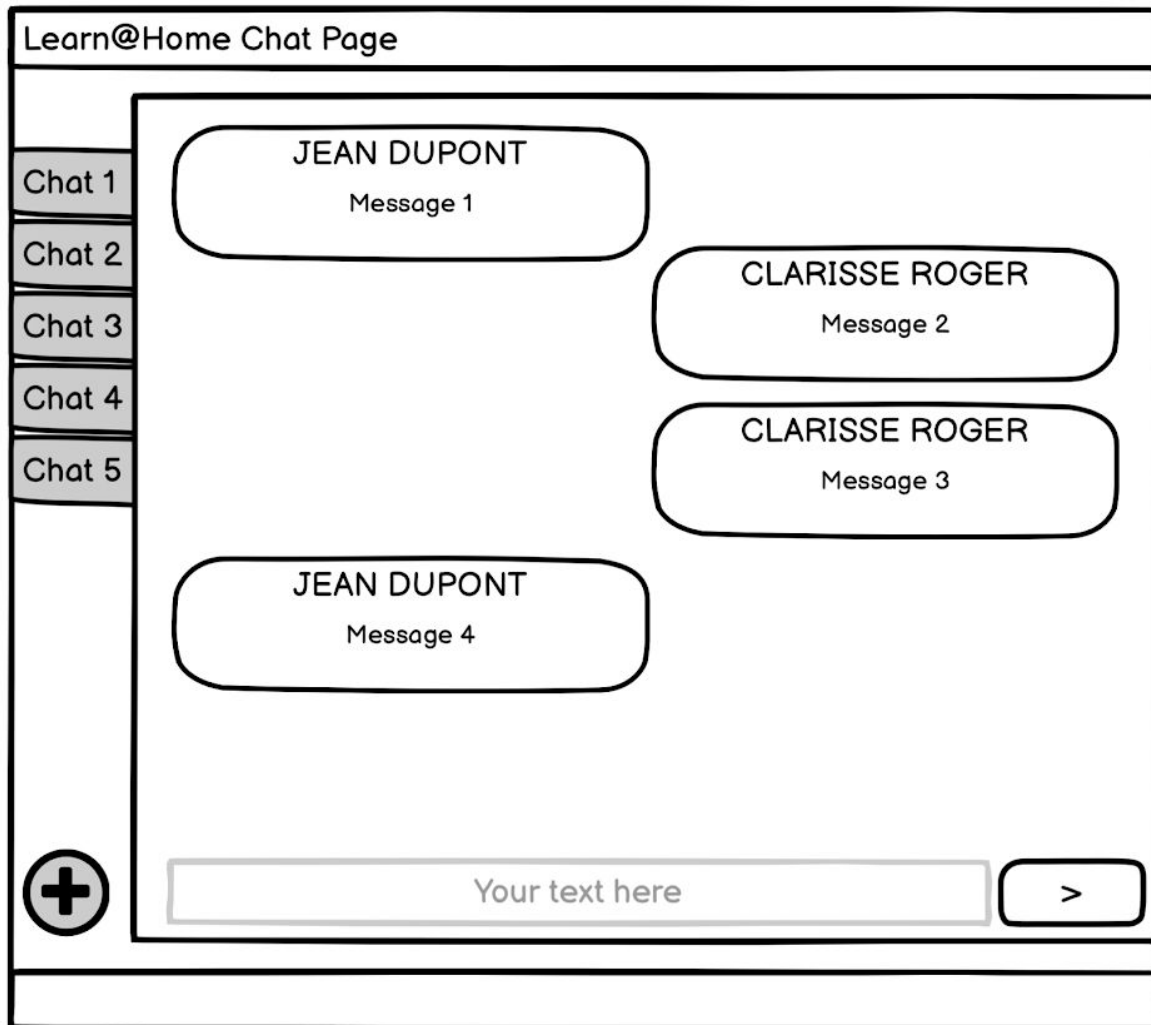

- A to-do list from the task management page (5).
- A to-do list from the calendar page (4).
- A counter of unread messages.

3. Chat Interface

Learn@Home's chat interface should be a classic chat page, integrating a system for instant discussion between students and volunteers. It should also provide access to the chat history, and the ability to add or delete a contact.

Below is an outline of Learn@Home's expectations for this page. Additional items should be added:

- The sender's profile picture next to each message.
- An indicator to show whether a message has been read or not.
- The message timestamp.

4. Calendar

The calendar page of Learn@Home should correspond to a classic calendar page, on which the user's various events and appointments are displayed.

5. Task Management

The interface of this page should allow you to create tasks for yourself or for another user.

- The student can only create tasks for himself.
- The volunteer can create tasks for the students he or she is following.
